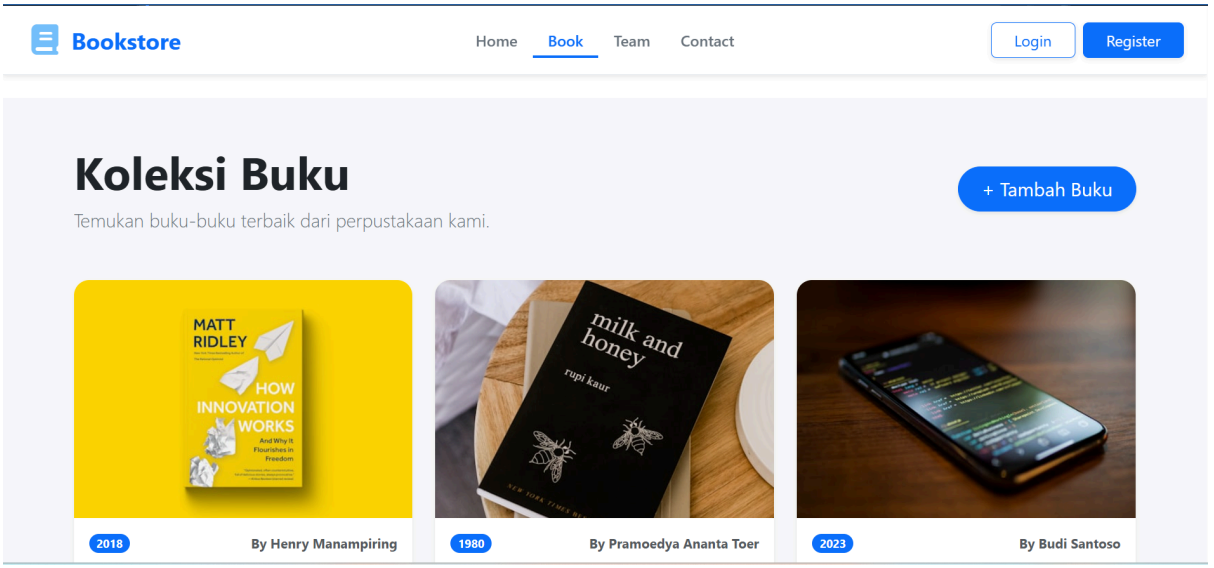
KAMPUS :POLITEKNIK NEGERI BANYUWANGI

TUGAS REACJS 3

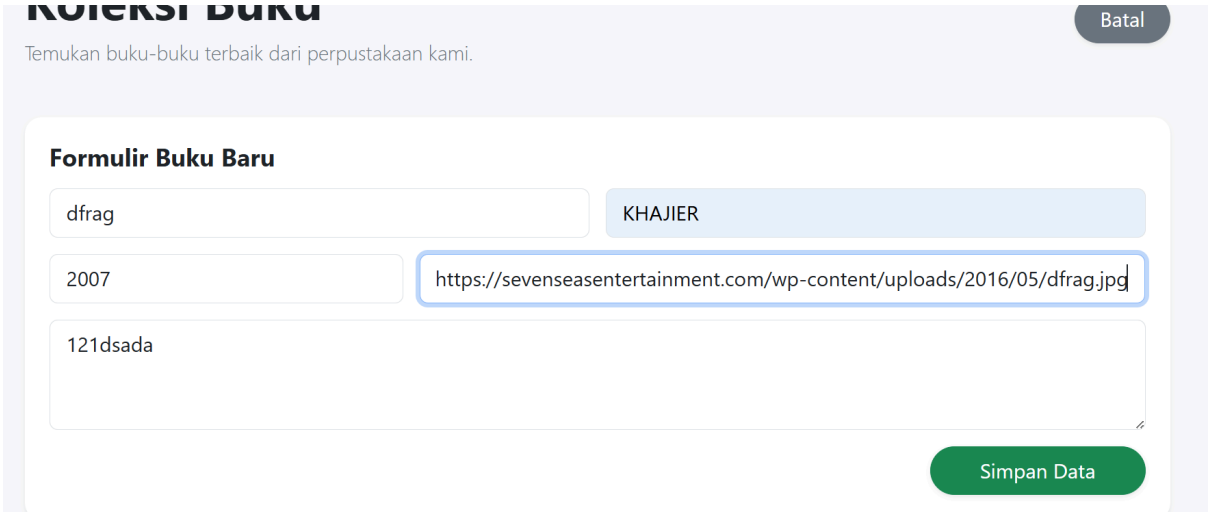
GITHUB : https://github.com/fakerryugan/booksale/tree/main

1. Tampilan Halaman Koleksi Buku



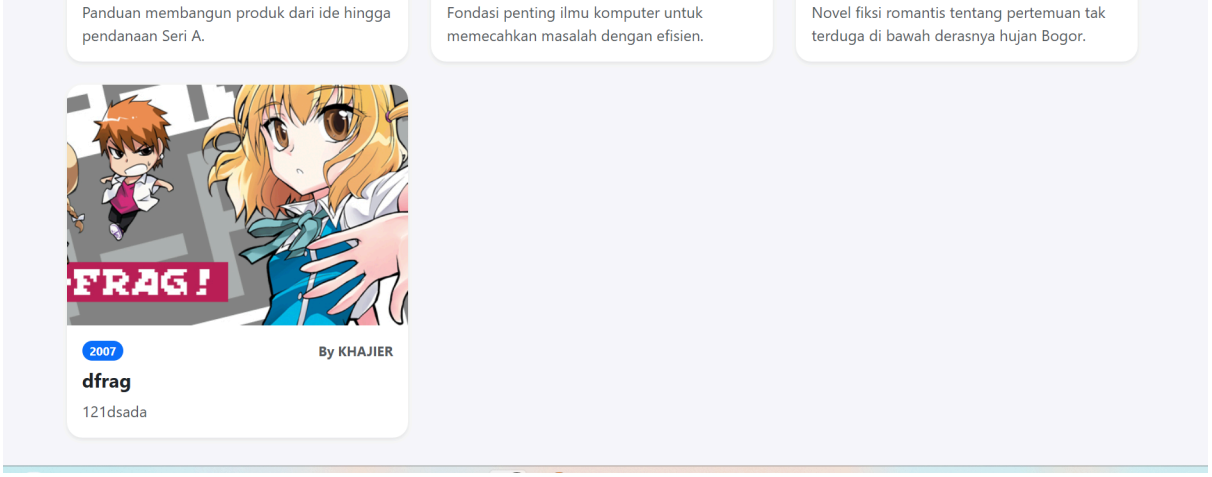
Keterangan: Halaman antarmuka yang menampilkan daftar buku menggunakan metode .map(). Terdapat tombol "+ Tambah Buku" untuk memunculkan formulir input.

2. Pengujian Form Tambah Buku Baru



Keterangan: Penggunaan state Hooks untuk menangani event perubahan input dari pengguna. Pada pengujian ini, data buku dengan judul "dfrag" dimasukkan melalui form.

3. Hasil Penambahan Data Buku



Keterangan: Komponen berhasil dirender ulang. Data baru "dfrag" yang ditambahkan melalui form langsung ter-render di daftar koleksi buku secara real-time.

4. Implementasi Kode Sumber (Hooks & Routing)

```
            </div>
            <div class="col-md-6">
              <input type="text" name="author" value={newBook.author} onChange={handleChange} class="form-control form-control-lg" placeholder="Penulis" required />
            </div>
            <div class="col-md-4">
              <input type="number" name="year" value={newBook.year} onChange={handleChange} class="form-control form-control-lg" placeholder="Tahun Terbit" />
            </div>
            <div class="col-md-8">
              <input type="text" name="image" value={newBook.image} onChange={handleChange} class="form-control form-control-lg" placeholder="URL Gambar Promosi (Opsional)" />
            </div>
            <div class="col-12">
              <textarea name="description" value={newBook.description} onChange={handleChange} class="form-control form-control-lg" rows="3" placeholder="Deskripsi Singkat"></textarea>
            </div>
